

# regenHU

BIOSYSTEM ARCHITECTS

*regenHU is a capital equipment provider that has been developing, manufacturing and distributing innovative hardware and software tools for 3D Bioprinting applications since 2007. We are a pioneer in the field and our global customer portfolio comprises key players in biotech, pharma, cosmetics and MedTech industries in addition to leading universities around the world.*

*As part of the Nivalis Group, RegenHU's headquarters are located in the technology park "Le Vivier" in Villaz-St-Pierre (Switzerland), housing several high-technology companies.*

We are currently seeking an

## **Operations Manager (F/M)** at 100 %

who will help us expand our manufacturing and supply chain management capabilities and take a key role in our fast-growing organization.

You will bring experience of growing a manufacturing capability in an established small to mid-sized engineering company. Our production and quality management teams are high functioning, however to continue our rapid growth and maximise our manufacturing potential, we are looking to introduce new ways of working. You will bring a passion for high quality and cost-effective manufacturing, and a knowledge of design for manufacturing and industrialization, and help implement this into our development processes. Supporting the integration of improved manufacturing and purchasing processes, you will also bring demonstrated skills and knowledge in strengthening relationships with external supplier networks.

### **Your responsibilities:**

- Manage all operational aspects of the company: sourcing, stock, production and logistics
- Clearly demonstrated ability to motivate and mentor team members
- Responsibility for manufacturing quality, costs, quantity, and delivery times
- Proven experience in setting up and promoting manufacturing management processes, and multiple production lines
- Skilled at supply chain management and supply chain security
- Ability to lead design transfer from R&D to manufacturing
- Responsible for the quality management system
- Highly skilled at using and extracting data from ERP systems
- Assist in managing stock, orders and cost control functions

### **Your profile:**

- Higher education (bachelor/master) in production & manufacturing or equivalent fields with proven experience in operation or process management
- More than 5 years of experience with similar responsibilities
- Manufacturing experience in scientific instruments, machine industry and/or robotics desired
- A natural leader with a clear mindset, capable of leading, building strong teams, promoting quality and knowledge transfer and meeting delivery deadlines
- Excellent communication skills
- Advanced English and French skills, additional languages a plus.

**Beginning:** immediately or upon agreement.
