

To support our growth, we are looking for a highly motivated

Intern in Software development (F/M)

Want to help shape the future of healthcare together? Then join us as a software intern in our R&D team!

Based on your preferences and background, your tasks will include:

- ✓ Developing bioprinting specific applications (C#/Python)
- ✓ Optimizing our algorithms for toolpath generation.
- ✓ Participating in the development of concepts and designs.
- ✓ Designing user interfaces according to state-of-the-art UX / UI guidelines.
- ✓ Developing modules and plugins for our C# software suite used to prepare bio-fabrication.

Your internship with us will give you the opportunity to gather hands-on experience and have a significant impact in our company by tackling concrete challenges in the rapidly evolving area of 3D bioprinting and biofabrication.

You could start immediately or upon agreement for a minimum duration of four months.

Want to join us? Apply now using our online platform.

www.regenhu.com/regenhu/jobs

regenHU is a pioneer and global leader in the field of bioprinting, converging digital manufacturing (3D printing), biomaterials and biotechnology to lead transformational innovations in Healthcare. Since 2007, the company dedicates its efforts to offer cutting-edge bioprinting instruments and solutions to scientific and R&D institutions from the medtech, biotech, pharma & cosmetic industries. Within our continuous improvement program, we propose several internship positions giving the opportunity, for students of different departments, to actively participate to development projects in multidisciplinary engineer domains such as microengineering, mechanical design, robotics, and computer science.
